The 11 Stewardship Principles

Daanaa's Founding Values — Non-Negotiable, Code-Enforced

Version: 1.0

Date: 2026-06-08

Status: Foundation Phase — Live Governance

Enforcement: Code-level veto gates, monthly audits, public dashboard

The 11 Principles

*1. **Mission Before Growth***

Purpose: Inform giving decisions. Growth can never override this.

Daanaa exists to help donors find and support nonprofits. We never accept paid placement, sponsored results, or revenue-based ranking. IRS/ProPublica data only.

How We Prove It:

- ■ Zero paid placements ever accepted

- ■ All ranking based on public data alone

- ■ No partnership pressure on scores

- ■ Annual public impact statement

*2. **Privacy is Core***

Purpose: Donor privacy protected. No social pressure. No exposure of giving.

We never store wallet data server-side. No social sharing. No tracking. Donors' giving activity is their business alone.

How We Prove It:

- ■ Zero donation data on servers

- ■ Wallet stored locally only

- ■ No social features

- ■ Quarterly GDPR/CCPA audit

3. **Trust Signals Must Be Evidence-Based**

Purpose: Every badge, score, link must be reviewable and honest.

Every financial health score comes from IRS data with source metadata. If evidence is weak, we say so. If we're wrong, we fix it publicly.

How We Prove It:

- ■ All scores traced to IRS columns

- ■ Metadata with every score (source, version, confidence)

- ■ Public methodology page

- ■ Visible correction path on every org page

4. **Fairness to Small Organizations**

Purpose: Small orgs get equal treatment, not automatic disadvantage.

Peer groups are NTEE × Revenue, never global. We actively surface "Hidden Gems" (small, financially healthy orgs). Small doesn't mean Spark.

How We Prove It:

- ■ Tier distribution equal by size

- ■ 1K+ Hidden Gems monthly

- ■ NTEE accuracy same for all sizes

- ■ Zero systematic small-org bias

*5. **We Do Not Weaponize Transparency***

Purpose: Inform responsibly. Never optimize for outrage or shame.

We don't use shame language. Tiers are visibility (raising the lamp), not verdicts. We're constructive, never destructive.

How We Prove It:

- ■ Zero failure framing

- ■ No shame language ("F-rated" never appears)

- ■ Constructive tone only

- ■ Org satisfaction when discovered: 94%+

*6. **Mistakes Must Be Corrected Quickly***

Purpose: Accuracy matters more than ego. Correct openly and promptly.

Data errors found → corrected same day. 100% disclosed publicly. Visible mistake registry on every org page.

How We Prove It:

- ■ <24 hour correction SLA

- ■ 100% of material errors disclosed

- ■ Public mistake registry

- ■ Monthly correction audit

7. **Independence Must Be Protected**

Purpose: No partner, sponsor, or outside party influences outcomes.

Zero partner influence on scores. Deterministic scoring (same input = same output always). Audit trail logged for every change.

How We Prove It:

- ■ Zero scoring customization

- ■ Partner agreements explicit: No influence

- ■ All algorithm changes logged

- ■ Quarterly independence audit

8. **We Do Not Control Donor Funds**

Purpose: Money never flows through Daanaa. We're discovery, not processing.

Zero payment processors. Zero funds held. Hand-off goes directly to org or EIN-based router. We never touch money.

How We Prove It:

- ■ Zero payment processors integrated

- ■ $0 funds held

- ■ All hand-offs direct to org or router

- ■ Money-flow audit: Clean

9. **Decisions Should Be Explainable Later**

Purpose: Document methodology and reasoning for future auditors.

All decisions logged (who, what, why, when). Methodology versioned. DECISIONS.md updated. Every action traceable.

How We Prove It:

- ■ 100% decision documentation

- ■ Public methodology history

- ■ Audit trail immutable

- ■ Auditor can trace any decision

10. **AI is a Tool, Not Replacement for Responsibility**

Purpose: Accountability remains human. Every AI output is reviewable.

Scores are deterministic IRS data, not AI-generated. AI used only for embeddings, cause tags (batch-reviewed before surfacing). Local inference preferred.

How We Prove It:

- ■ Zero AI-generated scores

- ■ 100% AI outputs human-reviewed

- ■ 95%+ local inference

- ■ <1% correction rate on AI

11. **Principles Are Strengthened, Not Quietly Weakened**

Purpose: Principles evolve, but never siluted for growth/efficiency pressure.

Principle changes require CEO + human approval + community vote (if major). All changes public. Zero silent erosion.

How We Prove It:

- ■ All principle changes public

- ■ Zero silent erosion attempts

- ■ 100% re-sign-off when principles change

- ■ Annual integrity audit

The Enforcement Architecture

Code-Level Veto Gates

Every agent decision goes through this:

IF decision violates any principle (1-11):

→ ESCALATE to CEO Agent

→ LOG violation attempt

→ BLOCK execution

ELSE:

→ Execute

→ LOG decision

Result: Corruption requires deliberate action against the system's own code.

Monthly Audit

First Friday of every month, 9 AM CDT:

Result: Public audit report, corrective actions tracked

Quarterly External Review

Independent auditor:

- Reviews principle compliance

- Unannounced code audit
- User satisfaction survey
- Impact metrics verification
- Report published (no hiding)

Annual Re-Certification

Every June:

- All agents re-sign stewardship commitment
- Founder (or board) re-certifies all 11 principles
- Revision log updated
- Next year's strategic priorities set
- Community impact report published

What These Principles Cost Us

What we give up:

- Paid placement revenue (could earn $500K+/year)
- Easier partnerships (we turn down high-value deals)
- Faster growth (conservative approach = slower adoption)
- Maximum metrics (we optimize for trust, not scale)

Why it's worth it:

- Donors trust us (no hidden agendas)
- Small orgs trust us (not systematically disadvantaged)
- Nonprofits trust us (no corrupt influence)
- Community trust (transparent, auditable)

Long-term payoff:

- Permanent brand equity (can't be compromised)

- Sustainable without compromise (no erosion)

- Mission-locked (principles outlive founder)

- Founder-proof (governance replaces bottleneck)

When Principles Conflict

Example: Principle 4 (Fairness to small orgs) vs. Principle 6 (Corrections)

Situation: Small org has data error that dropped their tier. Correcting it would take resources away from other corrections.

Resolution:

- Principles don't conflict; they rank by consequence

- Small org disadvantage is material (Principle 4 core)

- Correction is due (Principle 6 mandates <24h)

- **Action:** Prioritize this correction. Both principles are satisfied.

Key: When in doubt, escalate to human. Leadership decides (with principles as guide).

Signing This Document

By reading and accepting Daanaa, you agree to:

1. These 11 principles are non-negotiable

2. Code-level enforcement is the right approach

3. Monthly audits + public dashboards hold leadership accountable

4. Principle violations trigger escalation, not silence

5. Community trust is the highest value

For Agents: I acknowledge these principles and will escalate any violation.

For Leadership: I acknowledge these principles and will not compromise them.

For Community: We pledge accountability via code enforcement, audits, and transparency.

Status: ■ ACTIVE

Version: 1.0

Next Review: 2026-07-08 (monthly audit)

Next Certification: 2027-06-08 (annual)

Daanaa's 11 Stewardship Principles: How we stay honest at scale.
